

# ANTONYMIC EXCHANGE: HOW TO

1. Find a partner and exchange email addresses.
2. Flip a coin to decide who will initiate the exchange.
3. Designated participant selects an image from a google search, inserts into body of email message and sends to partner.
4. Partner responds to received image in the same email thread with another image determined to be an opposite.
5. This exchange continues daily or frequently, using images only and with Google Search only.
6. Each participant also keeps a separate, private email thread. Emailing to themselves, this thread is used for collecting meta-data:

*interpretation of received image*

*determination of suitable antonymic image*

*search terms*

*final term associated with selected image*

7. At future date TBD, share your collected meta-data, discuss patterns, techniques and other avenues of artisinal algorism.
